Stenting of the Right Ventricular Outflow Tract in the ...

A stent is a tube that your doctor inserts into a blocked passageway, such as a blood vessel, to keep it open. Stents are made of either metal or plastic, and stent grafts are larger types of ...

Stent: Purpose, Procedure, and Risks

A stent, which looks like a tiny coil of wire mesh, supports the walls of your artery and helps prevent it from re-narrowing after the angioplasty. Here's what happens during a stent placement: The stent, which is collapsed around a balloon at the tip of the catheter, is guided through the artery to the blockage.

Coronary angioplasty and stents - Mayo Clinic

WITH the advent of percutaneous coronary intervention (PCI), specifically the bare-metal stent (BMS) and subsequently, the drug-eluting stent (DES), the role of interventional cardiology in coronary revascularization has greatly increased.¹ An estimated 600,000 coronary artery stents are placed annually in the United States for the management of acute and chronic ...
