structure, that part is usually unaffected or is provided with some degree of protection. Where current leaves the structure, corrosion occurs. In underground work, this type of corrosion is often referred to as stray current corrosion and results from

Corrosion and Cathodic Protection

File Type PDF Corrosion And Cathodic Protection Theory Rushman **Theory**

Basic Theory of Metallic Corrosion

Corrosion is an electrochemical process in which four conditions must be present or corrosion will not take place: There must be a positive or anodic area, referred to as the “anode”. There must be a negative or cathodic area, referred to as the “cathode”

Protection | ScienceDirect

Cathodic Protection is a method of controlling corrosion and is based on electrochemical process. In this method, the corrosion of the cathode is achieved by concentrating the oxidation reaction in a galvanic cell at the anode.

cathodic protection

Corrosion theory entails that the process involves an anodic reaction. This type of reaction is produced through dissolving metal, which generates electrons. This is further consumed by another process called cathodic reaction. These two processes balance the charges produced.
