Current Transformer Design Guide. An effective design of a Ring Type C.T. may be produced first time using the following procedure, without any previous experience. Principles In operation the C.T. will induce current in its secondary winding and burden which serves to completely oppose the magnetising effect of the primary current, except for that small proportion required to magnetise the core.

Current Transformer Design. Current Transformer Design tool assists design engineers in choosing the most appropriate core material and size for a number of current transformer (CT) topologies. Traditional, often line frequency current transformers, Hall Effect current transformers and Switch-mode Power Supply (SMPS) current transformers are examined in depth. Program features include:

## **The Basics of Current Transformers**

The Current Transformer ( C.T. ), is a type of “instrument transformer” that is designed to produce an alternating current in its secondary winding which is proportional to the current being measured in its primary. Current transformers reduce high voltage currents to a much lower value and provide a convenient way of safely monitoring the actual electrical current flowing in an AC ...

## **Current Transformer Basics and the Current Transformer**

A current transformer is ideally a short-circuited transformer where the secondary terminal voltage is zero and the magnetizing current is negligible. Voltage transformers For a transformer in no load the following is valid: 1 2 1 2

Current transformers are divided up into classes according to their precision. Standard precision classes are 0.1; 0.2; 0.5; 1; 3; 5; 0.1 S; 0.2 S; 0.5 S. The class sign equates to an error curve pertaining to current and angle errors. The precision classes of current transformers are related to the measured value.

The signal delivered by the XTR40010 to the pulse transformer is a digital  $\pm 5V$  differential signal modulated with standard OOK modulation. The last stage of the XTR40010 transmitters implements a full bridge driver able to deliver at least 16mA DC current to the transformer with less than 10% drop of the output voltage.
