2. Suppose that you are employed as a data mining consultant for an In-ternet search engine company. Describe how data mining can help the company by giving specific examples of how techniques, such as clus-tering, classification, association rule mining, and anomaly detection can be applied. The following are examples of possible answers.

Introduction to Data Mining
A data mining solution can be based either on multidimensional data-that is, an existing cube-or on purely relational data, such as the tables and views in a data warehouse, or on text files, Excel workbooks, or other external data sources. You can create data mining objects within an existing multidimensional database solution.
