Metallurgy - Metallurgy - Physical metallurgy: Physical metallurgy is the science of making useful products out of metals. Metal parts can be made in a variety of ways, depending on the shape, properties, and cost desired in the finished product. The desired properties may be electrical, mechanical, magnetic, or chemical in nature; all of them can be enhanced by alloying and heat treatment.

An Introduction to Steel and Steel Metallurgy

Metallurgy 101 (by popular request) Metals are crystalline materials Although electrons are not shared between neighboring atoms in the lattice, the atoms of a metal are effectively covalently bonded. Copper and Aluminum form face centered cubic lattices in their common phase. Iron at low temperature forms a body centered cubic lattice.

Metallurgy - Metallurgy - Brass: While some zinc appears in bronzes dating from the Bronze Age, this was almost certainly an accidental inclusion, although it may foreshadow the complex ternary alloys of the early Iron Age, in which substantial amounts of zinc as well as tin may be found. Brass, as an alloy of copper and zinc without tin, did not appear in Egypt until about 30 bce, but after ...
