— Begin by placing the piers with their capitals (or the vaulting shafts and corbels if these are present) so as to obtain a footing for the ribs, cross-springers, and side arches. Draw all the arches except the diagonal ones, as previously explained, by means of A 2 rectangular shapes.

### Drawing Arches - Arch in Perspective

Perspective drawing is the most common drawing mode in 3D, where features in the foreground are shown larger than those off in the distance. This matches the way we see the world in our day-to-day lives, and the result is a realistic representation of 3D content. Parallel drawing, on the other hand, renders the 3D view using a parallel ...

Drawing with the Arc and Pie tools. The Arc tool and the Pie tool are handy when you need to know your arc's angle, rather than a bulge or radius. The Arc tool draws an open arc, and the Pie tool draws a closed, pie-shaped arc. To create an arc with the Arc or Pie tool, follow these steps: Select the Arc tool or the Pie tool (). The cursor changes to a pencil with an open arc or a closed arc, respectively, and a half-circle protractor indicates the orientation of a drawing plane.
