Rudin's Real and Complex Analysis is my favorite math book. I've studied it thoroughly as an undergrad/early grad student when I was training to be a research mathematician working in complex and harmonic analysis. Like much of Rudin's other writings, this book is written from an advanced perspective.

The summary says this classic Rudin book, Real & Complex Analysis, 3rd edition is 866 pages and says it can be read in 30 minutes. Obviously the 30 minutes read time must be based on the downloaded mess. Rudin's Principle of Analysis suffers from the same problems. The download provides random pages in disordered sequences, some incomplete.

Walter Rudin PROLOGUE THE EXPONENTIAL FUNCTION This is the most important function in mathematics. It is defined, for every complex number  $z$ , by the formula  $\exp(z) = \sum_{n=0}^{\infty} \frac{z^n}{n!}$ . The series (1) converges absolutely, for every  $z$  and converges uniformly on every bounded subset of the complex plane.

3 Prove that if  $f$  is a real function on a measurable space  $X$  such that  $f \cdot \chi_A$  is measurable for every rational  $r$ , then  $f$  is measurable. Solution: Let  $M$  denote the  $\sigma$ -algebra of measurable sets in  $X$ . Let  $\mathcal{C}$  be the collections of all  $E \in \mathcal{C}$  such that  $f \cdot \chi_E \in M$ . So for all rationals  $r$ ,  $r \in \mathcal{C}$ . Let  $\mathcal{D}$ : we will show  $\mathcal{C} = \mathcal{D}$ ; hence from

Rudin had exceptional mathematical taste, and that taste shines through both in those often-maligned slick proofs and in his choice of questions. If you take the time to ask why each question was asked, how it fits into the bigger picture, and what in the chapter it connects to, you will learn an incredible amount about the flavor of analysis.
